## Inventronics Services

### Guiding you with personal support

The implementation of a project is like a journey. At every stop, Inventronics offers you personal consulting, adequate tools and the technical support you need.

## Inventronics Services

Our expertise accompanies you all the way

**Inventronics** offers a wide range of services, allowing you to count on our professional and personalized support – from the first lines on your sketchpad until project completion.

Whether your project is to design and launch a new luminaire, to provide a work space with the latest light management system or to install stunning architectural lighting on your building – we are with you every step of the way.

Let us be part of your journey from the very beginning – with a team of experts you can rely on.

“Our expert knowledge  
for your made-to-measure  
solution. With services  
from A to Z!”

## Training

# Modern lighting made easy

Typically, your project journey begins with us providing you with all the information you need. Apart from basic product portfolio details, which you will receive from our sales community, we can offer in-depth knowledge transfer in various product, application and technology training courses via our Light Academy.

Usually, these training courses take place in our fully equipped training room in Munich, but they can also be held at a location of your choice. On-the-job training, specialized training units or training units tailored to your needs are also among the options offered by our Light Academy.

### **Inventronics Academy**

- At Inventronics facilities in Munich
- On customer premises
- Made-to-measure training
- Online training

# LIGHT ACADEMY

## Design-in support

### Achieve the optimum

Once your project's framework is set, you can use several of our online tools to quickly find the right LED driver or LED module. But whenever you'd like an extra set of eyes to review the technical specifications, you can rely on our team of on-site application engineers. Having tackled some of the most difficult challenges in the field of LED lighting, this team can bring additional insights and experience into your project. And they can do more than just find the right component, they can find the ideal LED lighting technologies solution for you.

- 1 Depending on your technical requirements, the **Lighting Designer** helps you find the perfect match of LED module and LED driver.
- 2 The **Driver Selector** assists you in finding the perfect LED driver for your requirements from our portfolio.
- 3 The **Flex Configurator** calculates the bill of materials (BOM) for flexible LED lighting solutions and creates a quote.
- 4 The **Speaking Code Generator** creates your order code for LINEARlight Rigid FINESSE solutions.
- 5 The **LED deSIGNer** helps you to calculate back- or sidelighting solutions.

- Lighting Experts (more than 15 Solution Managers and Field Application Engineers)
- Efficient online tools

## Measurements

### Certified testing services

Before you can launch your newly designed luminaire, it needs to be tested in order to ensure that it fulfills all necessary requirements. This is usually a time-consuming and costly process, but Inventronics is here to assist you. In the past, the main purpose of our laboratories was to test our own products, but now we offer a broad range of testing services to our customers as well. The quality of our laboratories has been widely recognized and certified by testing laboratories such as VDE and UL.

#### Individual tests

- Safety
- Electromagnetic compliance
- Photometry
- Mechanical, IP and ERP tests

## Project support

### A boost for your success

Knowing how many devices a room or building needs in order to be properly lit and comfortably controlled by a lighting system is key to any larger lighting project. This can be a challenging task. But who could advise you better on this than those who develop these devices? With state-of-the-art components, systems and software, our teams of experts can help you create floor plans, place motion sensors on the best spots or calculate the number of LED modules you need for a beautiful and uniformly lit stretch ceiling. We will support you to define a complete bill of materials to make your project a success.

#### Services for customized projects

- Feasibility check
- Product or system selection based on project size and component requirements
- Layouting
- Controls and sensors positioning based on building/facility plan
- Illuminated signs and ceilings
- Creation of bills of material (BOMs)

## Commissioning Finishing with flying colors

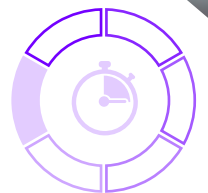

Even when your project is close to completion and you need someone to assist you with commissioning, you can always fully rely on us. We can perform on-site commissioning or provide on-the-job training. And if you're short on resources or have too many projects to handle at once, we'll simply dispatch one of our teams to ensure smooth project execution.

### Our commissioning services

- Remote support
- On-site support

## Aftersales support Continuous availability

We have now reached the destination of your project journey. But that doesn't mean that our support also has to end here. Because we will gladly provide you with advice and support at any time, even after your lighting system has been commissioned. That's why your contact person, who accompanied you from the first draft to the completion of your project, will continue to be available for your questions and concerns. Because this specialist knows your project in every detail, as if it were his own.

### Our aftersales services

- Remote support
- On-site support
- Failure analysis
